44 </html>
```

The image shows a Visual Studio Code editor window with the file 'function.js' open. The code defines a function 'tampilKandata' that takes 'biodata' as an argument and extracts values from its properties. It also defines a function 'menampilKandata' that alerts the HTML content of a table row. Finally, it updates the values in the 'biodata' object and alerts a success message.

```
1 function tampilKandata(biodata){
2   var Nama =(document.biodata.nama.value);
3   var Nim =(document.biodata.nim.value);
4   var Jns Kelamin =(document.biodata.Jenis Kelamin.value);
5   var Prodi =(document.biodata.prodi.value);
6   var Angkatan =(document.biodata.angkatan.value);
7
8
9   function menampilKandata() {
10    alert(document.getElementById("tabeldata").rows[1].innerHTML);
11  }
12
13  alert ("Berhasil menambah data");
14  document.biodata.nama.value=Nama;
15  document.biodata.nim.value=Nim;
16  document.biodata.Jenis Kelamin.value=Jns Kelamin;
17  document.biodata.prodi.value=Prodi;
18  document.biodata.angkatan.value=Angkatan;
19 }
```

The status bar at the bottom indicates the current position is Line 19, Column 2, with 4 spaces, using UTF-8 encoding and CRLF line endings for JavaScript.
